

# Duramax 6.6L 2017-2023 Exhaust Installation

## General Installation Guide

### Installation

Start with pipes 1 & 2, and then 5 & 4. Once those pipes are in, your mid section/muffler can be installed and completed.

When installing pipe 2, ensure that the hanger is level, and the "hook" is pointing downwards.

Note: Depending on box/cab configurations one cut may need to be made as these kits are designed around crew cab long box trucks. Must be modified to fit regular cab models.
